

DESIGN BY
JULIEN BERGIGNAT

Julien is a design entrepreneur and industrial designer before everything else. He constantly feeds himself with everyday things, he seeks to cause the "extra-ordinary", the wonder induced by a mixture of daily and magic among the users. He provides precision and care to the conceptualization and technical development of the project so that these crucial steps give way to the experience and sensations.

Born in Clermont-Ferrand in 1985, he grew up in the heart of France. Wishing to transform his passion for drawing and his curiosity about the industrialisation of objects in a career, he quickly decided to dive into the world of creation. After a Bachelor degree in Applied Arts with honors, a Technician certificate (BTS) in product design, he obtained in 2010, a Master degree in Industrial Design with summa cum laude at L'École de design Nantes Atlantique.

For him design is an everyday quest, that's why his professional experiences allows him to explore different design fields such as industrial products, limited edition, high hand as much as mass market objects, scenography and packaging design.
